Aerotech's Surface Measurement Platform

Advance to the next level of surface measurement technology by utilizing Aerotech's *Surface Measurement Motion Platform (SMP)*. The SMP is a complete multi-axis motion system that is specifically designed to provide an ideal motion platform for surface measurement applications. The SMP is optimized to provide more flexibility in 2D and 3D contouring, higher precision with nanometer resolution, significantly reduced processing time and minimal footprint.

SMP Benefits

More Flexibility

- 2D and 3D contouring
 - Measurement of spherical, aspheric and cylindrical shapes (Application example: precision optical component measurement)
 - Scanning or point-to-point motion profiles
 - Available in multiple configurations
- Generic high-speed electrical interface between the motion and sensor controller
- Open architecture software to integrate a large variety of sensors such as white light or multi-wavelength interferometers, camera systems or capacitive probes
- Easy-to-use, advanced motion algorithms ease motion profile generation

Higher Precision

- Axis repeatability in the low nanometer range
- Nanometer-level minimum incremental motion (resolution)
- Ultra-smooth motion even at very low velocities

Reduced Processing Time

- Save up to 40% of measurement time compared with conventional Cartesian systems
- Real-time communication between motion and sensor controller provides synchronization of measurement and position data
- Fast data access during the measurement and intelligent data management

Minimal Footprint

- 60% footprint savings compared to Cartesian systems

Common Surface Measurement Applications

Actual Surface Contour Plot

Aerotech's industry leading SMP platform was used to generate this state-of-the-art surface contour plot.

SMP-220 Individual Axis Specifications

Axis	C	RR	Z (Optional)	TT (Optional)
Resolution	0.08 arc sec	1 nm	1 nm	0.01 arc sec
Accuracy	±2 arc sec	±0.3 μm	±0.5 μm	3 arc sec
Repeatability	<1 arc sec	±75 nm	±100 nm	1.5 arc sec
Straightness	/	±1.0 μm	±1 μm	/
Flatness	/	±1.0 μm	±1 μm	/
Axial Error	<100 nm	/	/	/
Radial Error	<250 nm	/	/	/
Tilt Error	<0.7 arc sec	/	/	/
Travel	360° continuous	110 mm	50 mm	180°
Maximum Speed	1800°/s	350 mm/s	200 mm/s	120°/s

SMP-220 System Details

Maximum part size/ mass:	220 mm diameter; 31 kg
Maximum sensor mass:	1.5 kg
Sensor motion axes (RR, Z and TT axes):	All sensor axes are direct drive, brushless-motor-driven servo axes
Part motion axis (C axis):	360° continuous rotation, high-precision Aerotech rotary air-bearing

State-of-the-Art Control Electronics and Software that Complement the SMP

Aerotech Operator Interface
Aerotech's Operator Interface can be customized to suit any measurement application. This allows fast and efficient deployment of a custom solution.

Position Synchronized Output (PSO)
Aerotech's Position Synchronized Output (PSO) functionality provides a digital output based on real-time position feedback on up to three axes, providing precise sensor data capture.
